

PROGRAM OVERVIEW

Engage your 6-8 grade students to make a difference for our planet

The Resource Force is a green initiative designed to empower Illinois students in grades 6-8 and their communities to save energy. The program includes a play performed by two professional actors who come to your school and entertain students through a series of interactive comedy sketches, while teaching about resource and energy conservation. The actors invite input from your students to help create the show that they see, forming a unique performance for each audience.

Along with the live show, *The Resource Force* challenges your students (and staff) to save energy at home with Resource Kits: energy efficiency kits that contain items to conserve electricity and water. While your students save energy, *The Resource Force* measures the impact and awards schools cash prizes for their efforts.

Educational Concepts

- What natural resources are
- How students use natural resources
- How we waste natural resources
- What you can do about it
