

# Program Overview

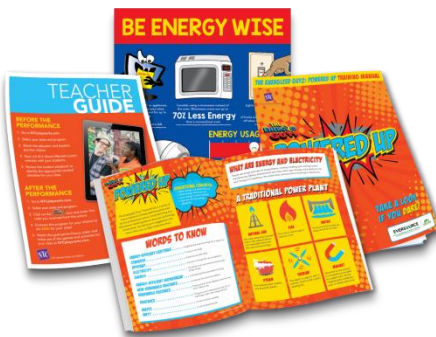

It happened.  
**Improv met education ...**  
And science just got a little more interesting!

*The Energized Guyz: Powered Up!* is performed by two professional actors who lead your students through a series of comical improvisational shenanigans, all while teaching about energy conservation and resources.

In this 35-minute play, your students in grades 4-5 will have the chance to help create the show that they see in front of them – giving the actors' collection of mad scientists, pirates and other characters suggestions for each and every comical scene to unfold!

Along with the in-school assembly, printed student playbooks, teacher guides, and digital games and activities are provided to expand upon the educational content of the program.

Student playbooks and teacher guides

## Educational Concepts

- What energy and electricity are
- What resources are
- How energy is used unwisely
- How we can use energy efficiently
