

Program Overview

ENERGY GUARDIANS

Energy Guardians is performed by two professional actors who lead your students through a series of comical improvisational shenanigans, all while teaching about energy conservation and resources.

In this 40-minute show, your students in grades 6-9 will get the chance to interact with the actors and offer up ideas to incorporate into each improvised sketch – in other words, they will *create* the show in front of them (with endless possibilities for hilarity)!

Along with the in-school assembly, digital materials are provided to expand upon the educational content of the program. *Energy Guardians* also challenges your students (and staff) to save energy at home by providing Energy Kits that contain items to conserve electricity and water.

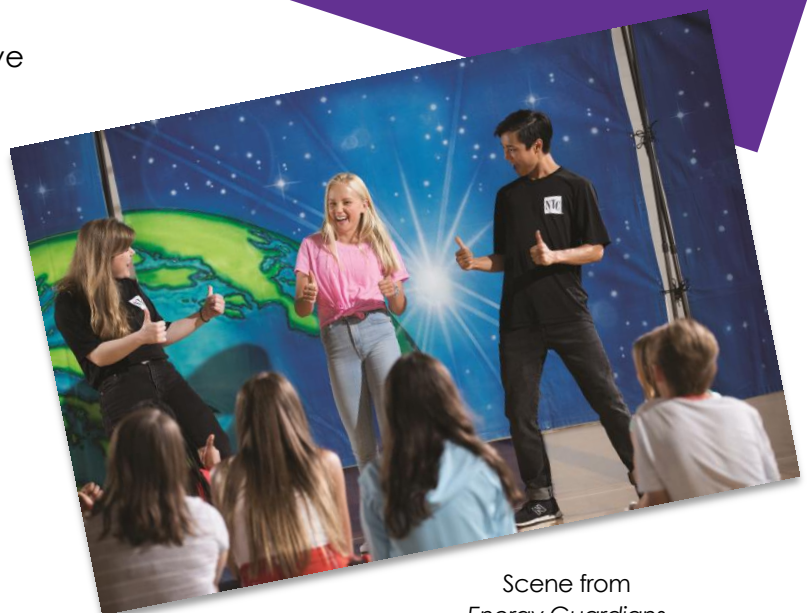

MyEnergyKit.org

It happened.
Improv met education ...
And science just got a little more interesting!

Educational Concepts

- How to measure energy use
- How energy is wasted
- How to conserve energy
- What renewable resources are
